The Millennial Project: Colonizing the Galaxy in Eight Easy Steps By Marshall T. Savage

The blueprint for the future of the American Space Programme. This book is both an argument for why humankind has an obligation to explore and colonize our apparently lifeless universe, and a practical step-by-step manual showing how we can inhabit other planets and travel amongst the stars. Plans range from constructing floating sea cities which can be used as training grounds for space colonization to building lunar ecospheres and harnessing the dream of using anti-matter for fuel.

Editorial Review

From Kirkus Reviews

In this boldly optimistic manifesto, Savage proclaims a master plan for the human race: to spread life throughout the galaxy. To many, space exploration seems irrelevant to Earth's real problems; but humanity may in fact have no other way to secure its long-term survival. To remain confined to Earth, Savage claims, is to court extinction, possibly within a few decades. Savage (an engineer who has established the Millennial Foundation to promote space exploration) outlines his program for transferring a significant portion of humanity off-planet. The crucial first step is to colonize the ocean surface with floating cities, quadrupling the living space available to the growing population of Earth. This allows us to reverse the degradation of the environment by shifting to the thermal energy of the deep ocean as our primary power source. At the same time, spirulina algae (already on sale in health food stores) becomes a major new food crop. The hardware for these oceanic colonies is already within practical reach: Savage provides a detailed inventory of how his floating cities would work and support themselves, with copious citations of the scientific literature. Once this move is well underway, it frees up energy and resources for the next steps. Improved space vehicles make possible orbiting space colonies, then settlements on the moon. A larger step is terraforming Mars--creating an atmosphere and a water supply for our lifeless neighbor to form a human habitat. On an even longer time scale, the race can expand into the rest of the solar system: asteroids and the moons of other planets. Ultimately, artificial habitats may completely surround the sun. With the resources of an entire solar system at our command, according to Savage, humanity can at last send out emissaries to other stars. The stuff of science fiction? Of course--but rigorously built from existing science, carefully documented, and convincingly argued. Highly recommended. -- *Copyright ©1994, Kirkus Associates, LP. All rights reserved.*

Users Review

From reader reviews:

Henry Knight:

Reading a book can be one of a lot of action that everyone in the world likes. Do you like reading book therefore. There are a lot of reasons why people enjoy it. First reading a reserve will give you a lot of new info. When you read a book you will get new information mainly because book is one of a number of ways to share the information as well as their idea. Second, looking at a book will make you actually more imaginative. When you examining a book especially fictional works book the author will bring someone to imagine the story how the character types do it anything. Third, it is possible to share your knowledge to other folks. When you read this The Millennial Project: Colonizing the Galaxy in Eight Easy Steps, it is possible to tells your family, friends and soon about yours book. Your knowledge can inspire others, make them reading a book.

Adam Schneider:

Precisely why? Because this The Millennial Project: Colonizing the Galaxy in Eight Easy Steps is an unordinary book that the inside of the e-book waiting for you to snap it but latter it will zap you with the secret it inside. Reading this book next to it was fantastic author who else write the book in such amazing way makes the content within easier to understand, entertaining approach but still convey the meaning fully.

So , it is good for you because of not hesitating having this any longer or you going to regret it. This excellent book will give you a lot of gains than the other book get such as help improving your skill and your critical thinking approach. So , still want to delay having that book? If I ended up you I will go to the guide store hurriedly.

Evelyn Roberts:

Many people spending their time by playing outside using friends, fun activity together with family or just watching TV the entire day. You can have new activity to enjoy your whole day by reading a book. Ugh, you think reading a book can definitely hard because you have to take the book everywhere? It fine you can have the e-book, bringing everywhere you want in your Smart phone. Like The Millennial Project: Colonizing the Galaxy in Eight Easy Steps which is getting the e-book version. So , why not try out this book? Let's view.

Lisa Yang:

What is your hobby? Have you heard that question when you got students? We believe that that question was given by teacher for their students. Many kinds of hobby, Everybody has different hobby. So you know that little person such as reading or as looking at become their hobby. You should know that reading is very important and book as to be the matter. Book is important thing to increase you knowledge, except your own personal teacher or lecturer. You will find good news or update regarding something by book. Different categories of books that can you go onto be your object. One of them are these claims The Millennial Project: Colonizing the Galaxy in Eight Easy Steps.
