Geodynamics By Donald L. Turcotte, Gerald Schubert

First published in 1982, Don Turcotte and Jerry Schubert's *Geodynamics* became a classic textbook for several generations of students of geophysics and geology. The authors bring this text completely up-to-date in this second edition. Important additions include a chapter on chemical geodynamics, an updated coverage of comparative planetology based on recent planetary missions, and a variety of other new topics. *Geodynamics* provides the fundamentals necessary for an understanding of the workings of the solid earth, describing the mechanics of earthquakes, volcanic eruptions, and mountain building in the context of the role of mantle convection and plate tectonics. Observations such as the earth's gravity field, surface heat flow, distribution of earthquakes, surface stresses and strains, and distribution of elements are discussed.

Editorial Review

Review

"...an excellent choice as a textbook or reference for teachers and students of our home planet. If you are looking for a single, comprehensive treatment of plate tectonics, I highly recommend this book. If, like me, you already own a well-worn first edition, the second edition offers enough new material to be worth adding to your library as well." *The Leading Edge*

"Geodynamics provides practical insight into the governing physics of many processes in geology and geophysics. ... Ideal for providing essential background for upper-level undergraduates and graduate students. ... Geodynamics also provides benchmark material for graduate student qualifying examinations. Researchers will find Geodynamics to be an excellent reference tool for basic equations and concepts, as well as for definitions and numerical values of many physical properties of the Earth and other planetary bodies. This textbook will also be valuable to scientists addressing problems outside of their fields of expertise, and to those expanding into new areas. ... The second edition of Geodynamics, like its predecessor, stands alone in its ability to link basic theory and geologic observation. Geodynamics should continue to benefit new generations of Earth scientists and students for decades to come." *EOS*

About the Author

Donald L. Turcotte is Distinguished Professor Emeritus in the Department of Geology, University of California, Davis. In addition to this book, he is author or co-author of 3 books and over 400 research papers, including *Fractals and Chaos in Geology and Geophysics* (Cambridge University Press, 1992 and 1997) and *Mantle Convection in the Earth and Planets* (with Gerald Schubert and Peter Olson, Cambridge University Press, 2001). Professor Turcotte is a Fellow of the American Geophysical Union, Honorary Fellow of the European Union of Geosciences, and Fellow of the Geological Society of America, and is also a member of the National Academy of Sciences and the American Academy of Arts and Sciences. He is the recipient of several medals, including the Day Medal of the Geological Society of America, the Wegener Medal of the European Union of Geosciences, the Bowie and Whitten Medals of the American Geophysical Union, the Regents (New York State) Medal of Excellence, and Caltech's Distinguished Alumnus Award.

Gerald Schubert is Distinguished Professor Emeritus in the Department of Earth, Planetary and Space Sciences at the University of California, Los Angeles. He is co-author with Donald Turcotte and Peter Olson of *Mantle Convection in the Earth and Planets* (Cambridge University Press, 2001) and author of over 530 research papers. He has participated in a number of NASA's planetary missions and has been on the editorial boards of many journals, including *Icarus*, the *Journal of Geophysical Research*, *Geophysical Research Letters*, and *Annual Reviews of Earth and Planetary Sciences*. Professor Schubert is a Fellow of the American Geophysical Union and a recipient of the Union's James B. MacElwane medal and the Harry H. Hess medal. He is a member of the National Academy of Sciences and the American Academy of Arts and Sciences.

From reader reviews:

Jeffrey Brown:

Now a day people that Living in the era exactly where everything reachable by match the internet and the

resources included can be true or not call for people to be aware of each details they get. How many people to be smart in acquiring any information nowadays? Of course the correct answer is reading a book. Studying a book can help men and women out of this uncertainty Information mainly this Geodynamics book as this book offers you rich details and knowledge. Of course the data in this book hundred pct guarantees there is no doubt in it you probably know this.

Latasha Sutterfield:

Nowadays reading books be than want or need but also turn into a life style. This reading practice give you lot of advantages. Associate programs you got of course the knowledge the particular information inside the book that will improve your knowledge and information. The information you get based on what kind of book you read, if you want attract knowledge just go with education and learning books but if you want truly feel happy read one with theme for entertaining for example comic or novel. Typically the Geodynamics is kind of publication which is giving the reader capricious experience.

Ella Woods:

Reading a guide can be one of a lot of task that everyone in the world loves. Do you like reading book so. There are a lot of reasons why people enjoyed. First reading a book will give you a lot of new facts. When you read a book you will get new information since book is one of many ways to share the information or their idea. Second, studying a book will make anyone more imaginative.
