Rubber Technology By Maurice Morton

About ten years after the publication of the Second Edition (1973), it became apparent that it was time for an up-date of this book. This was especially true in this case, since the subject matter has traditionally dealt mainly with the structure, properties, and technology of the various elastomers used in industry, and these are bound to undergo significant changes over the period of a decade. In revising the contents of this volume, it was thought best to keep the original format. Hence the first five chapters discuss the same general subject matter as before. The chapters dealing with natural rubber and the synthetic elastomers are up-dated, and an entirely new chapter has been added on the thermoplastic elastomers, which have, of course, grown tremendously in importance. Another innovation is the addition of a new chapter, "Miscellaneous Elastomers," to take care of "old" elastomers, e.g., polysulfides, which have decreased somewhat in importance, as well as to introduce some of the newly-developed synthetic rubbers which have not yet reached high production levels. The editor wishes to express his sincere appreciation to all the contributors, without whose close cooperation this task would have been impossible. He would especially like to acknowledge the invaluable assistance of Dr. Howard Stephens in the planning of this book, and for his suggestion of suitable authors.

Editorial Review

Users Review

From reader reviews:

Nicholas Sheen:

As people who live in the actual modest era should be upgrade about what going on or data even knowledge to make all of them keep up with the era which is always change and move forward. Some of you maybe may update themselves by studying books. It is a good choice for you but the problems coming to you is you don't know what kind you should start with. This Rubber Technology is our recommendation to help you keep up with the world. Why, because book serves what you want and wish in this era.

Keith Vanwagoner:

Spent a free a chance to be fun activity to do! A lot of people spent their spare time with their family, or all their friends. Usually they performing activity like watching television, likely to beach, or picnic within the park. They actually doing ditto every week. Do you feel it? Would you like to something different to fill your personal free time/ holiday? May be reading a book might be option to fill your no cost time/ holiday. The first thing that you will ask may be what kinds of e-book that you should read. If you want to consider look for book, may be the reserve untitled Rubber Technology can be excellent book to read. May be it is usually best activity to you.

Lorna Dews:

Precisely why? Because this Rubber Technology is an unordinary book that the inside of the guide waiting for you to snap the idea but latter it will zap you with the secret this inside. Reading this book close to it was fantastic author who else write the book in such wonderful way makes the content inside of easier to understand, entertaining means but still convey the meaning totally. So , it is good for you for not hesitating having this any more or you going to regret it. This book will give you a lot of positive aspects than the other book include such as help improving your skill and your critical thinking way. So , still want to hesitate having that book? If I were you I will go to the guide store hurriedly.

Amy Smith:

As a college student exactly feel bored in order to reading. If their teacher inquired them to go to the library in order to make summary for some guide, they are complained. Just little students that has reading's internal or real their passion. They just do what the trainer want, like asked to go to the library. They go to right now there but nothing reading significantly. Any students feel that examining is not important, boring and also can't see colorful photos on there. Yeah, it is for being complicated. Book is very important to suit your needs. As we know that on this period of time, many ways to get whatever we want. Likewise word says,

ways to reach Chinese's country. Therefore this Rubber Technology can make you feel more interested to read.
