Climate for Change: Non-State Actors and the Global Politics of the Greenhouse (International Hydrology Series) By Peter Newell

This volume provides a challenging explanation of the forces that have shaped the international global warming debate. It takes a novel approach to the subject by concentrating on the ways non-state actors--such as scientific, environmental and industry groups, as opposed to governmental organizations--affect political outcomes in global fora on climate change. It also provides insights into the role of the media in influencing the agenda. The book draws on a range of analytical approaches to assess and explain the influence of these nongovernmental organizations on the course of global climate politics. The book will be of interest to all researchers and policy makers associated with climate change, and will be used in university courses in international relations, politics, and environmental studies.

Editorial Review

Review

"...each chapter does an admirable job of highlighting the multiple and complex ways in which each set of nongovernmental actors exercises influence in global climate politics...Newell deserves much credit for directly addressing the methodological challenges associated with detecting and analyzing such phenomena as 'reputational' power and the 'mobilization of bias...' This timely and probing critique of the progressive international temper of our times should be read and pondered by anyone who takes an interest in the ethics of contemporary world politics." Canadian Journal of Political Science

"...Newell makes many excellent points about the political scene surrounding global change..." Geoscience Canada

Users Review

From reader reviews:

Lillian Albrecht:

The guide with title Climate for Change: Non-State Actors and the Global Politics of the Greenhouse (International Hydrology Series) includes a lot of information that you can discover it.
