**Handbook of Chlor-Alkali Technology (5 Volume Set)** By Thomas F. O'Brien, Tilak V. Bommaraju, Fumio Hine

Concentrated treatment of all aspects of technology and handling directly related to the products of electrolysis.

Thoroughly up to date and should become the standard reference in its field.

## **Editorial Review**

From the Back Cover

Made from common salt and water, chlorine and its co-product, caustic soda, are two of the most basic building blocks used for a wide range of products valued by society. The Handbook of Chlor-Alkali Technology provides comprehensive and concise treatments of all aspects of technology and handling directly related to the products of electrolysis. A long-awaited comprehensive treatment, it covers the field from a history of the industry, through the fundamentals of thermodynamics and electrochemistry, to the treatment and disposal of the waste products of manufacture. While membrane cells are considered state-of-the-art, the handbook does not ignore mercury and diaphragm cells. They are considered both from a historical perspective and as examples of current technology that yet evolves. Special attention is paid to safe handling of the products, the obligations of Responsible Care®, and process safety management. Other major topics include corrosion, membranes, electrolyzer design, brine preparation and treatment, and the design and operation of processing facilities. The coverage of membranes is both fundamental and applied. The underlying transport processes and practical experience with existing types of membrane both are covered, as is electrolyzer design. The book explores the basic electrode processes and the fundamentals of current distribution in electrolyzers as well as the characteristics of the leading cell designs while the appendix offers selected physical property data. The authors, each with extensive experience in chlor-alkali technology but with diverse backgrounds and fields of specialization, achieve both breadth and depth. Anyone with interest in the large field of chlor-alkali manufacture and distribution, and indeed in industrial electrochemistry in general, will find something useful here. The Handbook offers not only broad coverage, but also in depth treatment of each topic. It will be an asset to managers, process engineers and operating personnel working in the chlor-alkali industry. This book provides valuable information to engineers and scientists involved in development of chlor-alkali technology and in the design of new plant or upgrading of existing plants. It will be especially valuable to universities as it begins with fundamentals and progresses methodically through each step involved in chlor-alkali production, including environmental issues.

from the Foreword by *Barrie S. Gilliatt, Executive Director, Euro Chlor*

"Anyone with interest in the large field of chlor-alkali manufacture and distribution, and indeed in industrial electrochemistry in general, will find something useful here. The work is recommended to students; chlor-alkali technologists; electrochemists; engineers; and producers, shippers, packagers, distributors, and consumers of chlorine, caustic soda, and caustic potash. This book is thoroughly up to date and should become the standard reference in its field. "

About the Author

**Tom O'Brien** has spent approximately twenty-five years of his chemical engineering career in the electrochemical field. In addition to many technical studies, safety reviews, and consulting assignments, he has been deeply involved in the engineering, construction and commissioning of more than twenty-five operating plants in sixteen different countries producing chlorine, bromine, phosgene, ethylene dichloride, solid and liquid alkalis and sodium chlorate. Since his retirement in 1999, he has performed selected consulting assignments for worldwide clients.

Dr. O'Brien is currently working on two other books, one dealing with Sherlock Holmes, the other a mathematical analysis of baseball statistics.

**Tilak V. Bommaraju** received his PhD in Chemistry in 1967 from Banaras Hindu University in India. He was a post doctoral fellow at the state University of New York at Buffalo and at the University of Ottawa.

Dr. Bommaraju has worked as a research chemist for the International Nickel Company of Canada, performing research and development in the electrometallurgy of Ni, Cu, and Zn. He has also worked as a Senior Scientist and Technical Manager for Chlor-Alkali and Chlorate Operations Support for Occidental Chemical.

From 1973-1998, Dr. Bommaraju was Vice President of Research and Development for ICET, Inc. He has published over 85 papers and holds 27 patents. He was the co-editor of "Technique of Electro-Organic Synthesis – Scale-up and Engineering Aspects: Part III."

Currently, Dr. Bommaraju is the Vice President-Technology of Process Technology Optimization, Inc. The company's primary focus is contract research in the field of electrochemistry and chemical engineering, process evaluation and optimization, custom chemical engineering, and consulting in the chlor-alkali and chlorate technologies and corrosion.

Born in Osaka, Japan, **Fumio Hine**, received his doctorate at Kyoto University in 1960 and was named Professor there in 1965. Dr. Hine joined the Nagoya Institute of Technology in 1969, and recommended as Professor Emeritus in 1991.

Dr. Hine was a Fulbright Scholar and has received awards from the Kinki Chemical Society, Osaka and Japan Soda Industry Association for his activity in Chlor-alkali technology. Dr. Hine is the author of *Electrode Processes and Electrochemical Engineering* (1985), *Chemistry and Chemical Engineering in the Chlor-Alkali Industry* and other works on electrochemistry, inorganic chemistry, and corrosion engineering. He has presented more than three hundred papers and reviews and organized two symposia – Electrochemical Engineering in the Chlor-Alkali and Chlorate Industries and Performance of Electrodes for Industrial Electrochemical Processes.

Dr. Hine is a member of numerous international societies and committees including the Electrochemical Society, the American Institute of Chemical Engineering, the National Association of Corrosion Engineers, and the Chemical Society of Japan. He is a licensed P.E. for Chemical Process Industries. In 1988, Dr. Hine visited Argentina to improve the amalgam-type chlor-industry in the Bahia Blanca Chemical Complex as requested by United Nations Industrial Development Organization. A former news editor for *Electrochemical Technology*, he is presently the science advisor for the Japan Soda Industry Association and an industrial consultant in the USA, Japan and other countries.

## **Users Review**

**From reader reviews:**

**Christina Rogers:**

Do you one among people who can't read gratifying if the sentence chained in the straightway, hold on guys this aren't like that. This Handbook of Chlor-Alkali Technology (5 Volume Set) book is readable simply by you who hate the straight word style. You will find the information here are arrange for enjoyable looking at experience without leaving perhaps decrease the knowledge that want to deliver to you. The writer regarding Handbook of Chlor-Alkali Technology (5 Volume Set) content conveys prospect easily to understand by many individuals. The printed and e-book are not different in the content but it just different such as it. So , do you still thinking Handbook of Chlor-Alkali Technology (5 Volume Set) is not loveable to be your top listing reading book?

**Timothy Brown:**

This Handbook of Chlor-Alkali Technology (5 Volume Set) are usually reliable for you who want to be considered a successful person, why. The explanation of this Handbook of Chlor-Alkali Technology (5 Volume Set) can be one of the great books you must have is usually giving you more than just simple studying food but feed an individual with information that probably will shock your before knowledge. This book is definitely handy, you can bring it all over the place and whenever your conditions in the e-book and printed ones. Beside that this Handbook of Chlor-Alkali Technology (5 Volume Set) giving you an enormous of experience like rich vocabulary, giving you trial of critical thinking that we all know it useful in your day task. So , let's have it and enjoy reading.

**George Thomas:**

This Handbook of Chlor-Alkali Technology (5 Volume Set) is fresh way for you who has attention to look for some information given it relief your hunger info. Getting deeper you into it getting knowledge more you know or you who still having little digest in reading this Handbook of Chlor-Alkali Technology (5 Volume Set) can be the light food for you because the information inside this specific book is easy to get by simply anyone. These books produce itself in the form and that is reachable by anyone, that's why I mean in the e-book web form. People who think that in publication form make them feel tired even dizzy this e-book is the answer. So you cannot find any in reading a e-book especially this one. You can find what you are looking for. It should be here for you. So , don't miss the idea! Just read this e-book kind for your better life along with knowledge.

**Clarence McKeever:**

That publication can make you to feel relax. This kind of book Handbook of Chlor-Alkali Technology (5 Volume Set) was vibrant and of course has pictures on the website. As we know that book Handbook of Chlor-Alkali Technology (5 Volume Set) has many kinds or type. Start from kids until teens. For example Naruto or Detective Conan you can read and think that you are the character on there. So , not at all of book are generally make you bored, any it makes you feel happy, fun and unwind. Try to choose the best book to suit your needs and try to like reading this.
