Mechanics of Materials, 7th Edition (Mechanical Engineering) By Ferdinand P. Beer, E. Russell Johnston Jr., John T. DeWolf, David F. Mazurek

Mechanics of Materials is the uncontested leader for the teaching of solid mechanics. Used by thousands of students around the globe since publication, Mechanics of Materials provides a precise presentation of the subject illustrated with numerous engineering examples that students both understand and relate to theory and application. The tried and true methodology for presenting material gives students the best opportunity to succeed in this course. From the detailed examples, to the homework problems, to the carefully developed solutions manual, instructors and students can be confident the material is clearly explained and accurately represented.

McGraw-Hill Education's Connect, is also available as an optional, add on item. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, how they need it, so that class time is more effective. Connect allows the professor to assign homework, quizzes, and tests easily and automatically grades and records the scores of the student's work. Problems are randomized to prevent sharing of answers and may also have a "multi-step solution" which helps move the students' learning along if they experience difficulty.

Editorial Review

About the Author

John T. DeWolf, Professor of Civil Engineering at the University of Connecticut, joined the Beer and Johnston team as an author on the second edition of *Mechanics of Materials*. John holds a B.S. degree in civil engineering from the University of Hawaii and M.E. and Ph.D. degrees in structural engineering from Cornell University. His research interests are in the area of elastic stability, bridge monitoring, and structural analysis and design. He is a registered Professional Engineer and a member of the Connecticut Board of Professional Engineers. He was selected as the University of Connecticut Teaching Fellow in 2006.

David holds a B.S. degree in ocean engineering and a M.S. degree in civil engineering from the Florida Institute of Technology, and a Ph.D. degree in civil engineering from the University of Connecticut. He was employed by General Dynamics Corporation Electric Boat Division for five years, where he provided submarine construction support and conducted engineering design and analysis associated with pressure hull and other structures. In addition, he conducted research in the area of noise and vibration transmission reduction in submarines. He then taught at Lafayette College for one year prior to joining the civil engineering faculty at the U.S. Coast Guard Academy, where he has been since 1990. David is currently a member of the American Railway Engineering & Maintenance-of-way Association Committee 15 (Steel Structures), and the American Society of Civil Engineers Committee on Blast, Shock, and Vibratory Effects. He has also worked with the Federal Railroad Administration on their bridge inspection training program. Professional interests include bridge engineering, railroad engineering, tall towers, structural forensics, and blast-resistant design. He is a licensed professional engineer in Connecticut and Pennsylvania.

Born in France and educated in France and Switzerland, Ferd held an M.S. degree from the Sorbonne and an Sc.D. degree in theoretical mechanics from the University of Geneva. He came to the United States after serving in the French army during the early part of World War II and had taught for four years at Williams College in the Williams-MIT joint arts and engineering program. Following his service at Williams College, Ferd joined the faculty of Lehigh University where he taught for thirty-seven years. He held several positions, including the University Distinguished Professors Chair and Chairman of the Mechanical Engineering and Mechanics Department, and in 1995 Ferd was awarded an honorary Doctor of Engineering degree by Lehigh University.

Born in Philadelphia, Russ holds a B.S. degree in civil engineering from the University of Delaware and an Sc.D. degree in the field of structural engineering from The Massachusetts Institute of Technology (MIT). He taught at Lehigh University and Worcester Polytechnic Institute (WPI) before joining the faculty of the

University of Connecticut where he held the position of Chairman of the Civil Engineering Department and taught for twenty-six years. In 1991 Russ received the Outstanding Civil Engineer Award from the Connecticut Section of the American Society of Civil Engineers.

Users Review

From reader reviews:

Gina Dana:

Here thing why this particular Mechanics of Materials, 7th Edition (Mechanical Engineering) are different and dependable to be yours. First of all reading a book is good however it depends in the content from it which is the content is as scrumptious as food or not. Mechanics of Materials, 7th Edition (Mechanical Engineering) giving you information deeper as different ways, you can find any publication out there but there is no reserve that similar with Mechanics of Materials, 7th Edition (Mechanical Engineering). It gives you thrill looking at journey, its open up your own eyes about the thing that will happened in the world which is possibly can be happened around you. You can bring everywhere like in park your car, café, or even in your technique home by train. In case you are having difficulties in bringing the printed book maybe the form of Mechanics of Materials, 7th Edition (Mechanical Engineering) in e-book can be your choice.

Teresa Thomas:

Information is provisions for those to get better life, information nowadays can get by anyone on everywhere. The information can be a know-how or any news even an issue. What people must be consider any time those information which is in the former life are challenging to be find than now is taking seriously which one is appropriate to believe or which one the actual resource are convinced. If you find the unstable resource then you obtain it as your main information you will see huge disadvantage for you. All of those possibilities will not happen with you if you take Mechanics of Materials, 7th Edition (Mechanical Engineering) as your daily resource information.

Larry Devries:

Do you really one of the book lovers? If yes, do you ever feeling doubt if you find yourself in the book store? Make an effort to pick one book that you find out the inside because don't judge book by its handle may doesn't work at this point is difficult job because you are afraid that the inside maybe not since fantastic as in the outside seem likes. Maybe you answer might be Mechanics of Materials, 7th Edition (Mechanical Engineering) why because the fantastic cover that make you consider with regards to the content will not disappoint you. The inside or content is actually fantastic as the outside or maybe cover. Your reading sixth sense will directly assist you to pick up this book.

Beth Johnson:

What is your hobby? Have you heard in which question when you got learners? We believe that that issue was given by teacher to the students. Many kinds of hobby, Every person has different hobby. And also you know that little person like reading or as reading through become their hobby. You should know that reading

is very important along with book as to be the issue. Book is important thing to add you knowledge, except your own teacher or lecturer. You discover good news or update concerning something by book. Many kinds of books that can you choose to use be your object. One of them is this Mechanics of Materials, 7th Edition (Mechanical Engineering).
