Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers

From Wiley

By recirculating light in a nonlinear propagation medium, the nonlinear optical cavity allows for countless options of light transformation and manipulation. In passive media, optical bistability and frequency conversion are central figures. In active media, laser light can be generated with versatile underlying dynamics. Emphasizing on ultrafast dynamics, the vital arena for the information technology, the soliton is a common conceptual keyword, thriving into its modern developments with the closely related denominations of dissipative solitons and cavity solitons. Recent technological breakthroughs in optical cavities, from micro-resonators to ultra-long fiber cavities, have entitled the exploration of nonlinear optical dynamics over unprecedented spatial and temporal orders of magnitude. By gathering key contributions by renowned experts, this book aims at bridging the gap between recent research topics with a view to foster cross-fertilization between research areas and stimulating creative optical engineering design.

Editorial Review

About the Author

Philippe Grellu has been Professor of Physics at Université de Bourgogne, in Dijon, France, since 2005. After receiving his PhD at University of Orsay (Paris XI) in quantum optics (1996), his interest moved to ultrafast nonlinear optics and mode-locked fiber lasers. His research includes spatio-temporal soliton dynamics and nonlinear microfiber optics. He developed a key expertise in nonlinear optical cavity dynamics, with major contributions in the fast developing field of dissipative solitons. He has delivered numerous invited talks at international conferences and has authored over 150 scientific publications.

Users Review

From reader reviews:

Larry Parrish:

This Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers book is absolutely not ordinary book, you have it then the world is in your hands. The benefit you have by reading this book is information inside this book incredible fresh, you will get data which is getting deeper an individual read a lot of information you will get. This specific Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers without we realize teach the one who examining it become critical in considering and analyzing. Don't be worry Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers can bring once you are and not make your carrier space or bookshelves' come to be full because you can have it in your lovely laptop even cellphone. This Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers having excellent arrangement in word as well as layout, so you will not sense uninterested in reading.

Thelma Scott:

The event that you get from Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers may be the more deep you searching the information that hide inside words the more you get serious about reading it. It doesn't mean that this book is hard to know but Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers giving you thrill feeling of reading. The author conveys their point in a number of way that can be understood by anyone who read the idea because the author of this publication is well-known enough. This kind of book also makes your own vocabulary increase well. Making it easy to understand then can go together with you, both in printed or e-book style are available. We propose you for having that Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers instantly.

David Anthony:

Your reading sixth sense will not betray a person, why because this Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers guide written by well-known writer we are excited for well how to make book that could be understand by anyone who have read the book. Written throughout good manner for you, still dripping wet every ideas and publishing skill only for eliminate your personal hunger then you still

doubt Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers as good book not only by the cover but also through the content. This is one e-book that can break don't assess book by its cover, so do you still needing one more sixth sense to pick this kind of!? Oh come on your studying sixth sense already told you so why you have to listening to yet another sixth sense.

Deborah Mazzarella:

That guide can make you to feel relax. That book Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers was vibrant and of course has pictures on the website. As we know that book Nonlinear Optical Cavity Dynamics: From Microresonators to Fiber Lasers has many kinds or variety. Start from kids until youngsters. For example Naruto or Investigator Conan you can read and feel that you are the character on there. So , not at all of book are usually make you bored, any it offers up you feel happy, fun and relax. Try to choose the best book for you personally and try to like reading in which.
