The Grammar of Graphics (Statistics and Computing) By Leland Wilkinson

This book was written for statisticians, computer scientists, geographers, research and applied scientists, and others interested in visualizing data. It presents a unique foundation for producing almost every quantitative graphic found in scientific journals, newspapers, statistical packages, and data visualization systems. This foundation was designed for a distributed computing environment (Internet, Intranet, client-server), with special attention given to conserving computer code and system resources. While the tangible result of this work is a Java production graphics library (GPL) developed in collaboration with Dan Rope and Dan Carr, this book focuses on the deep structures involved in producing quantitative graphics from data. What are the rules that underly the production of pie charts, bar charts, scatterplots, function plots, maps, mosaics, radar charts? These rules are abstracted from the work of Bertin, Cleveland, Kosslyn, MacEachren, Pinker, Tufte, Tukey, Tobler, and other theorists of quantitative graphics. Those less interested in the theoretical and mathematical foundations can still get a sense of the richness and structure of the system by examining the numerous and often unique color graphics it can produce. Leland Wilkinson is Senior VP, SYSTAT Products at SPSS Inc. and Adjunct Professor of Statistics at Northwestern University. He wrote the SYSTAT statistical package and founded SYSTAT Inc. in 1984. Wilkinson joined SPSS in a 1994 acquisition and now works on research and development of graphical applications for data mining and statistics. He is a Fellow of the ASA and an Associate Editor of The American Statistician. In addition to journal articles and the original SYSTAT computer program and manuals, Wilkinson is the author (with Grant Blank and Chris Gruber) of Desktop Data Analysis with SYSTAT.

Editorial Review

About the Author

Leland Wilkinson is Senior VP, SYSTAT Products at SPSS Inc. and Adjunct Professor of Statistics at Northwestern University. He wrote the SYSTAT statistical package and founded SYSTAT Inc. in 1984. Wilkinson joined SPSS in a 1994 acquisition and now works on research and development of graphical applications for data mining and statistics. He is a Fellow of the ASA and an Associate Editor of The American Statistician. In addition to journal articles and the original SYSTAT computer program and manuals, Wilkinson is the author (with Grant Blank and Chris Gruber) of Desktop Data Analysis with SYSTAT.

Users Review

From reader reviews:

David Marx:

As people who live in the actual modest era should be up-date about what going on or info even knowledge to make these people keep up with the era and that is always change and advance. Some of you maybe may update themselves by studying books. It is a good choice to suit your needs but the problems coming to an individual is you don't know which one you should start with. This The Grammar of Graphics (Statistics and Computing) is our recommendation to make you keep up with the world. Why, because book serves what you want and want in this era.

Robert Lee:

The ability that you get from The Grammar of Graphics (Statistics and Computing) could be the more deep you digging the information that hide in the words the more you get enthusiastic about reading it. It doesn't mean that this book is hard to understand but The Grammar of Graphics (Statistics and Computing) giving you enjoyment feeling of reading. The author conveys their point in a number of way that can be understood through anyone who read the idea because the author of this book is well-known enough. This kind of book also makes your personal vocabulary increase well. Therefore it is easy to understand then can go to you, both in printed or e-book style are available. We advise you for having this specific The Grammar of Graphics (Statistics and Computing) instantly.

Kelly Spinney:

Reading a e-book can be one of a lot of activity that everyone in the world likes. Do you like reading book therefore. There are a lot of reasons why people enjoyed. First reading a e-book will give you a lot of new info. When you read a guide you will get new information simply because book is one of numerous ways to share the information or perhaps their idea. Second, reading a book will make you more imaginative. When you looking at a book especially fictional book the author will bring that you imagine the story how the personas do it anything. Third, you may share your knowledge to other people. When you read this The

Grammar of Graphics (Statistics and Computing), it is possible to tell your family, friends as well as soon about your e-book. Your knowledge can inspire others, make them reading a publication.

Gloria Quinones:

Playing with family in the park, coming to see the water world or hanging out with friends is thing that usually you have done when you have spare time, then why you don't try thing that really opposite from that. A single activity that make you not experience tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of information. Even you love The Grammar of Graphics (Statistics and Computing), you are able to enjoy both. It is good combination right, you still wish to miss it? What kind of hangout type is it? Oh seriously its mind hangout guys. What? Still don't get it, oh come on its called reading friends.
