### Math Education for America?: Policy Networks, Big Business, and Pedagogy Wars (Sociocultural, Political, and Historical Studies in Education) By Mark Wolfmeyer

*Math Education for America?* analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States. The effort to standardize a national mathematics curriculum for public schools in the U.S. culminated in 2010 when over 40 states adopted the *Common Core State Standards for Mathematics*. Rather than looking at the text of specific policy documents, this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis. Breaking new ground in detailing and theorizing the politics of math education, Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments: human capital education policy, debates over traditional and reform pedagogy, the assumed content knowledge deficit of math teachers, and the proliferation of profit-driven educational businesses. By establishing the interconnectedness of these interests with the national math education curriculum, he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest.

### **Editorial Review**

Review

“... An extremely important book. The extensive network analysis linking the math pedagogies to particular institutional interests is valuable for understanding the complicated picture of who supports particular policy movements and why.”

**Kenneth Saltman, DePaul University, USA**

"Wolfmeyer takes on the tasks of identifying who is behind the move toward the nationalization of mathematics education as well as making transparent their vision of mathematics for the citizens of the United States. He argues that math-ematics education is being skewed toward the interests of corporations by corpo-rate proxies and academics. Wolfmeyer shows the intermingling of the corporate representatives, academics, and government agencies behind the nationalization of mathematics education through a critical analysis of the policy networks, or social network analysis (SNA)."

**Jeff Barger, NSTA Recommends**

About the Author

**Michael Earl:**

As we know that book is important thing to add our know-how for everything. By a publication we can know everything we want. A book is a set of written, printed, illustrated or maybe blank sheet. Every year has been exactly added. This e-book Math Education for America?: Policy Networks, Big Business, and Pedagogy Wars (Sociocultural, Political, and Historical Studies in Education) was filled in relation to science. Spend your time to add your knowledge about your technology competence. Some people has diverse feel when they reading a book. If you know how big benefit of a book, you can truly feel enjoy to read a e-book. In the modern era like now, many ways to get book you wanted.

**Clarissa Holland:**

As a pupil exactly feel bored in order to reading. If their teacher inquired them to go to the library or make summary for some guide, they are complained. Just minor students that has reading's heart or real their interest. They just do what the teacher want, like asked to go to the library. They go to presently there but nothing reading critically. Any students feel that reading is not important, boring and can't see colorful pics on there. Yeah, it is to become complicated. Book is very important for yourself. As we know that on this period, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore , this Math Education for America?: Policy Networks, Big Business, and Pedagogy Wars (Sociocultural, Political, and Historical Studies in Education) can make you really feel more interested to read.
