Shape Interrogation for Computer Aided Design and Manufacturing By
Nicholas M. Patrikalakis, Takashi Maekawa

Shape interrogation is the process of extraction of information from a geometric model. It is a fundamental component of Computer Aided Design and Manufacturing (CAD/CAM) systems. This book provides a bridge between the areas geometric modeling and solid modeling. Apart from the differential geometry topics covered, the entire book is based on the unifying concept of recasting all shape interrogation problems to the solution of a nonlinear system. It provides the mathematical fundamentals as well as algorithms for various shape interrogation methods including nonlinear polynomial solvers, intersection problems, differential geometry of intersection curves, distance functions, curve and surface interrogation, umbilics and lines of curvature, and geodesics.

Editorial Review

Review

From the reviews:

"... Currently there are several excellent books in the area of geometric modeling and in the area of solid modeling. The major contribution of this book lies in its skilful manner of providing a bridge between these two areas that is guaranteed to make the target audience cry out aloud with delight. Apart from the differential geometry topics covered, the entire book is based on the unifying concept of recasting all shape interrogation problems to the solution of a nonlinear system. Indeed the book is quite compulsive; No study of shape interrogation can ignore Patrikalakis and Maekawa's. Nearly 460 references to the literature make the book widely welcomed. ..."

Current Engineering Practice 2002-2003, Vol. 45, Issue 3-4

"... It provides a comprehensive coverage of the fundamental concepts that shape interrogation techniques rely on as well as of the various techniques and algorithms for interrogation of shape features. ... Containing 408 pages, the book can be an indispensable reference for anybody with interest in this field of computer aided geometric design and software development. Nick Patrikalakis and Takashi Maekawa, researchers at MIT, managed to present all related concepts in an insightful way. The careful arrangement of the topics and the endeavor of the authors to recast all shape interrogation problem to the numerical solution of a nonlinear system of equations impressed the reviewer. ..."

I. Horváth, Structural and Multidisciplinary Optimization 2003, Vol. 24, Issue 6

"...this is a very detailed and complete book on topics that are important in both the theory and practice of geometric modeling. It is a welcome addition to the literature. Reading it and experimenting with the techniques it describes should be a rewarding experience."

Luiz Henrique de Figueiredo, MATHEMATICAL REVIEWS

"... This book by Patrikalakis and Maekawa is the first thorough, long overdue, look at this crucial area. The book presents an original and inclusive summary of advanced computational topics that relate to the geometry of freeform shapes. Research in these computational areas has matured to a point where such a compendium is no longer nice to have on one's shelf, but a necessity for the serious investigator. The book handles computational problems that represent fundamental components in any solid modeling environment, filling a vacuum in the literature. It will serve well any researcher, either in academia or industry, working in the area of freeform design or manufacturing. This work continues from the point where the traditional geometric design and solid modeling books stop. ..."

Shape interrogation and computational geometry of freeform shapes have been a part of the geometric design and manufacturing community for a long time. This book makes efforts and is likely to become the 'Bible' for this area. As a high-quality produced book, it is a must reference for any advanced researcher or developer who works with splines and freeform representations. If you consider yourself one, this book

should probably be on your bookshelf. I eagerly await what the first revision of this book may yield."

Gershon Elber, Computer-Aided Design 35 (2003) 1053

"'Shape Interrogation' in general means the process of extracting information from a geometric model. ... The aim of this text is to provide an exhaustive list of tools and algorithms useful for shape interrogation of freeform curves and surfaces. Their effectivity depends on the end user's capability of solving systems of nonlinear equations, which is one reason for the author's focus on robust polynomial solvers." (Johannes Wallner, Zentralblatt MATH, Vol. 1035, 2004)

The book will inform and enlighten professionals in industry and therefore remains essential reading for them too." (Current Engineering Practice, Vol. 45 (3-4), 2002-03)

From the Back Cover

Shape interrogation is the process of extraction of information from a geometric model. It is a fundamental component of Computer Aided Design and Manufacturing (CAD/CAM) systems. The authors focus on shape interrogation of geometric models bounded by free-form surfaces. Free-form surfaces, also called

sculptured surfaces, are widely used in the bodies of ships, automobiles and aircraft, which have both functionality and attractive shape requirements. Many electronic devices as well as consumer products are designed with aesthetic shapes, which involve free-form surfaces. This book provides the mathematical fundamentals as well as algorithms for various shape interrogation methods.

From the reviews:

"This book provides the mathematical fundamentals as well as algorithms for various shape interrogation methods including nonlinear polynomial solvers, intersection problems, differential geometry of intersection curves, distance functions, curve and surface interrogation, umbilics and lines of curvature, geodesics, and offset curves and surfaces. [...] It may well be one of the most important books of the 2002s that has been written on shape interrogation for graduate students in mathematics, engineering, computer science, focusing on geometrical modeling and solid modeling. The book will inform and enlighten professionals in industry and therefore remains essential reading for them too. Currently there are several excellent books in the area of geometric modeling and in the area of solid modeling. From reader reviews:

Jimmy Dietz:

Playing with family in the park, coming to see the marine world or hanging out with good friends is thing that usually you will have done when you have spare time, in that case why you don't try matter that really opposite from that. A single activity that make you not feeling tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of knowledge. Even you love Shape Interrogation for Computer Aided Design and Manufacturing, you can enjoy both. It is great combination right, you still wish to miss it? What kind of hang type is it? Oh come on its mind hangout fellas. What? Still don't buy it, oh come on its called reading friends.

Mary Bunnell:

Can you one of the book lovers? If so, do you ever feeling doubt if you find yourself in the book store? Try to pick one book that you just dont know the inside because don't assess book by its include may doesn't work this is difficult job because you are afraid that the inside maybe not while fantastic as in the outside appear likes. Maybe you answer could be Shape Interrogation for Computer Aided Design and Manufacturing why because the excellent cover that make you consider in regards to the content will not disappooint anyone. The inside or content is definitely fantastic as the outside or maybe cover. Your reading 6th sense will directly assist you to pick up this book.

Stephen Thrush:

This Shape Interrogation for Computer Aided Design and Manufacturing is great e-book for you because the content which is full of information for you who always deal with world and get to make decision every minute. This book reveal it facts accurately using great plan word or we can declare no rambling sentences within it. So if you are read it hurriedly you can have whole info in it. Doesn't mean it only gives you straight forward sentences but tough core information with beautiful delivering sentences. Having Shape Interrogation for Computer Aided Design and Manufacturing in your hand like obtaining the world in your arm, details in it is not ridiculous 1. We can say that no reserve that offer you world throughout ten or fifteen second right but this e-book already do that. So , this is certainly good reading book. Hey there Mr. and Mrs. active do you still doubt that?

Clarice Stephens:

Reading a guide make you to get more knowledge as a result. You can take knowledge and information originating from a book. Book is published or printed or highlighted from each source which filled update of news. In this particular modern era like today, many ways to get information are available for an individual. From media social similar to newspaper, magazines, science guide, encyclopedia, reference book, story and comic. You can add your knowledge by that book. Are you hip to spend your spare time to spread out your book? Or just looking for the Shape Interrogation for Computer Aided Design and Manufacturing when you required it?
