## Color Theory and Its Application in Art and Design (Springer Series in Optical Sciences) By George A. Agoston

This book directly addresses a long-felt, unsatisfied need of modern color science - an appreciative and technically sound presentation of the principles and main offerings of colorimetry to artists and designers, written by one of them. With his unique blend of training and experience in engineering, with his lifelong interest and, latterly, career in art and art education, Dr. Agoston is unusually well prepared to convey the message of color science to art and design. His book fulfills the hopes I had when I first heard about him and his book. I foresee important and long-lasting impacts of this book, analogous to those of the epoch-making writings by earlier artist-scientists, such as Leonardo, Chevreul, Munsell, and Pope. Nearly all persons who have contributed to color science, recently as well as formerly, were attracted to the study of color by color in art. Use of objective or scientific methods did not result from any cold, detached attitude, but from the inherent difficulties of the problems concerning color and its use, by which they were intrigued. Modern education and experience has taught many people how to tackle difficult problems by use of scientific methods. Therefore - color science.

### **Editorial Review**

From the Back Cover

International Federation for Information Processing

The IFIP series publishes state-of-the-art results in the sciences and technologies of information and communication. The scope of the series includes: foundations of computer science; software theory and practice; education; computer applications in technology; communication systems; systems modeling and optimization; information systems; computers and society; computer systems technology; security and protection in information processing systems; artificial intelligence; and human-computer interaction. Proceedings and post-proceedings of refereed international conferences in computer science and interdisciplinary fields are featured. These results often precede journal publication and represent the most current research. The principal aim of the IFIP series is to encourage education and the dissemination and exchange of information about all aspects of computing.

For more information about the 300 other books in the IFIP series, please visit [www.springer.com](http://www.springer.com).

### **Users Review**

**From reader reviews:**

**Grace Moreno:**

What do you regarding book? It is not important with you? Or just adding material when you need something to explain what the ones you have problem? How about your free time? Or are you busy particular person? If you don't have spare time to accomplish others business, it is make one feel bored faster. And you have free time? What did you do? All people has many questions above. They have to answer that question since just their can do in which. It said that about guide. Book is familiar in each person. Yes, it is appropriate. Because start from on jardín de infancia until university need that Color Theory and Its Application in Art and Design (Springer Series in Optical Sciences) to read.

**Barbara Goodman:**

Information is provisions for individuals to get better life, information presently can get by anyone on everywhere. The information can be a know-how or any news even a concern. What people must be consider whenever those information which is inside former life are hard to be find than now is taking seriously which one would work to believe or which one the resource are convinced. If you receive the unstable resource then you have it as your main information there will be huge disadvantage for you. All those possibilities will not happen inside you if you take Color Theory and Its Application in Art and Design (Springer Series in Optical Sciences) as your daily resource information.

**James Sirois:**

Many people spending their period by playing outside with friends, fun activity with family or just watching TV 24 hours a day. You can have new activity to enjoy your whole day by studying a book. Ugh, think reading a book can really hard because you have to take the book everywhere? It alright you can have the e-book, getting everywhere you want in your Mobile phone. Like Color Theory and Its Application in Art and Design (Springer Series in Optical Sciences) which is getting the e-book version. So , why not try out this book? Let's find.

**Ann Macdonald:**

As a student exactly feel bored to help reading. If their teacher questioned them to go to the library as well as to make summary for some guide, they are complained. Just very little students that has reading's spirit or real their passion. They just do what the trainer want, like asked to go to the library. They go to at this time there but nothing reading very seriously. Any students feel that examining is not important, boring along with can't see colorful photos on there. Yeah, it is to get complicated. Book is very important for you personally. As we know that on this age, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. Therefore , this Color Theory and Its Application in Art and Design (Springer Series in Optical Sciences) can make you really feel more interested to read.
