Urban Design: Green Dimensions By J. C. Moughtin

This book explores sustainable development and green design in relation to urban structure and built form.

The subject matter of this book is the pattern or structure of the city: it concentrates particularly on the organisation of the public realm. The book aims to relate the main component of urban design to a general theory or urban structuring with a strong design emphasis but within the general field of sustainable city development. Any discussion of urban design that does not address environmental issues has little meaning at a time of declining resources, ozone layer destruction and fears of the greenhouse effect. The book therefore discusses built form, street block, quarter, city centres and city structure in terms of energy conservation and sustainability.

This book will be valuable in raising awareness and generating debate as well as providing useful reference material. It not only observes and documents the roots and growth of green design but will influence design, transport and policy for the future.

Editorial Review

Review

'This book is a serious and valuable exploration of green design in urban settings.'

Perspectives

'Students should benefit from the imaginative layout and readability which lay down the key principles for the further development of environmental issues.'

MJ Culus, Library Advisor, Swansea Institute of Higher Education

From the Publisher

The subject matter of this book is the pattern or structure of the city: it concentrates particularly on the organization of the public realm. The book aims to relate the main component of urban design to a general theory or urban structuring with a strong design emphasis but within the general field of sustainable city development. Any discussion of urban design that does not address environmental issues has little meaning at a time of declining resources, ozone layer destruction and fears of the greenhouse effect. The book therefore discusses built form, street block, quarter, city centers and city structure in terms of energy conservation and sustainability. This book will be valuable in raising awareness and generating debate as well as providing useful reference material. It not only observes and documents the roots and growth of green design, but also will influence design, transport and policy for the future.

From the Back Cover

The subject matter of this book is the pattern or structure of the city: it concentrates particularly upon the organization of the public realm. The book aims to relate the main components of urban design to a general theory or urban structuring with a strong design emphasis but within the general field of sustainable city development. There is some doubt about the long term survival of the planet as a vehicle for sustained human occupation in anything other than a degraded lifestyle. Any discussion of urban design which does not address environmental issues has little meaning at a time of declining natural resources, ozone layer destruction and fears of the greenhouse effect. The book therefore discusses built form, street block, quarter and city structure in terms of energy conservation and sustainability.

Users Review

From reader reviews:

Erma Carver:

Do you have favorite book? For those who have, what is your favorite's book? Book is very important thing for us to learn everything in the world. Each book has different aim as well as goal; it means that publication has different type. Some people really feel enjoy to spend their time to read a book.
